

Congratulations on purchasing AudioZomba *Shimmer* – the best vinyl cleaning product available and the choice of Professionals.

Instructions for Use

- Remove your record from its protective sleeve
- Place on your Turntable and remove loose dust and dirt using a carbon fibre or other cleaning brush whilst revolving from centre outwards.
- Remove from turntable and place on a clean supportive surface – The AudioZomba Cork Cleaning Mat is ideal
- Shake *Shimmer* bottle well – it will gently foam due to the added wetting surfactant
- Spray 3 or 4 times around the playing surfaces from atomiser or dab onto cloth if using straight from the economy refill
- Scrunch your lint free microfibre cloth into a ball and work into the grooves with even pressure in a clockwise motion from the middle outwards ensuring that all the playing surfaces are wetted. Do not over wet – the *Shimmer* spreads out and finds the grooves
- *Shimmer* has a built in drying agent – you won't need to wait too long for the record to dry, it will evaporate in a few moments once you've finished.
- Always return the disc to its protective sleeve after playing/cleaning.

Enjoy your vinyl!!!
